

RS1 Non-Refrigeration

**Halide Free Ultra Life Paste
SAC 305 (Sn96.5/Ag3.0/Cu0.5)**

DESCRIPTION

RS1 Development has been formulated to provide increased stability at room temperatures whilst maintaining excellent printing and wetting properties.

RS1 Development gives bright, smooth and shiny void free solder joints with low, clear, post process residues that make for reliable pin probe testing.

RS1 Development is particularly suitable for fine pitch printing due to reduced particle size.

BENEFITS

- Does not require refrigeration
- Prints down to at least 0.2mm
- Decreased "head-in-pillow" problem
- Constant viscosity during 3 days continuous printing
- Constant viscosity during storage for 30 days up to 50°C
- Superior wetting and spreading characteristics
- Reduces or eliminates voiding, particularly under BGA's
- High resistance to slumping
- High humidity resistance
- High resistance to solder balling
- Extended stencil life
- 24-48 hour tack time

Typical specifications and test results

	Specification
Alloy	96.5Sn, 3.0Ag, 0.5Cu
Flux type and content	12% RMA
Particle size	T4 20-38 Micron
Alloy melting temp	216-221°C
Viscosity	180
Tensile Strength (MPa)	37
Elongation	33%
Wetting time	1.58 sec
Silver Chromate Test	No discolouration
Insulation resistance	Pass
Electromigration	Pass
J-STD-004	ROLO

APPLICATION

If the product has been refrigerated allow to warm up to room temperature (at least 8 hours) if using for the first time. Stir with a spatula for at least 30 seconds to ensure homogenisation of paste. Apply sufficient paste to stencil to allow a smooth even roll. A bead diameter of 1/2 to 5/8 inch is normally sufficient. Squeegees should be set at 60° for highest print definition. Pressure should be around about 0.28-0.33Kg/sq cm, print speed 20-150mm/sec with 0.0mm snap-off distance (on contact).

Do not store new and used paste in the same container. Once a pot of paste has been opened, replace the internal plug, re-seal and store in a cool place out of direct sunlight. Do not return to fridge. Paste that has not been opened may be kept in a refrigerator for at least 8 months.

Paste can be stored at up to 50°C for 30 days without affecting viscosity.

This paste does not require refrigerated storage, however can be stored in a fridge if you prefer.

REFLOW

The **RS1 Development** paste can be reflowed using any of the two most commonly used profile types i.e RSS (Ramp-Soak-Spike) and RTS (Ramp-To-Spike). Please refer to Reflow Profile on page 2.

EQUIPMENT AND CIRCUIT CLEANING

BLT manufactures a range of aqueous and solvent cleaning equipment for stencils and misprinted boards. SCS/1 and SCS/2 are particularly recommended for use with **RS1** series solder pastes.

Post cleaning is not necessary for **RS1 Development** but should absolute cleanliness be required, then Vigon US or Vigon N 600 is recommended.

SUPPORT DATA & TEST RESULTS

Printability

Type 4 Solder Spheres 20-38 microns giving excellent printing definition.

Recommended Reflow Profile

Typical Profile length 3-4.5 minutes

Initial heating rate 1-4°C

Soak time from 150-180° C 60-90 secs or 60-120 seconds if using a faster initial heating rate to 170°C

Ramp from 180°C to peak 2-3°C per second

Time above 220° C 45-75 seconds

Peak temp 240-260°C * to accommodate some LED component profiles*

Cool down 2- 4°C per second

Please find two examples of a typical RSS and RTS with the RS1 paste on the following 2 pages.
